Lr.No.CE(IT)/DE(IT&Basis)/ADE-CS/F.CISO/D.No.193 /25-26, Dt: 18.03.2026

Sir/Madam,

Sub: TGTRANSCO – Guidelines for Strengthening Cyber security - Certain Measures – Issued - Reg.

Ref: Lr.No. CE(IT)/DE(IT&Basis)/ADE-CS/F.CISO/D.No.163/25-26, Dt: 12.02.2026.

* * *

Certain measures were issued vide reference cited above and also in various letters from this office (available in ESS Portal), for strengthening of Cyber Security posture in the Organization, for safe and secure utilization of IT & OT infrastructure.

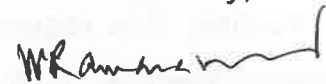

Further, it is requested to communicate the following measures on Web Browser Security to the employees working under your control and ensure adoption under their jurisdiction.

- Always check that the website URL begins with HTTPS and shows a secure lock icon before entering any sensitive data. Avoid entering sensitive information on HTTP websites.
- Verify the website domain carefully to avoid phishing sites as attackers may use domains that look similar to legitimate ones.
- Avoid using the browser autofill feature for storing usernames, passwords and other sensitive information.
- Always log out of web applications (email, company portals) after completing work and delete the browsing history, especially on shared or public computers.
- Regularly review and remove saved site permissions for websites that no longer require access.

- Keep your web browser (Chrome, Firefox, Microsoft Edge etc.,) updated to the latest version to ensure security patches and vulnerability fixes are applied.
- Disable automatic file downloads in browser settings to prevent unauthorized or malicious files from being saved to your device.
- Avoid accessing company systems through public Wi-Fi networks unless connected through a secure VPN.
- Be cautious of browser pop-ups requesting software downloads, updates, or security alerts, as they may be malicious.
- Enable browser security features such as pop-up blocking, safe browsing etc.

Secure browsing is the first step toward protecting digital identities!
Be Cyber Safe!! Stay Vigilant!!!

Yours Faithfully,

Chief Engineer (S/C)
Information Technology & CISO

Certain measures were issued vide reference cited above and also in various letters from this office (available in ESS Portal), for strengthening of Cyber Security in the Organization, for safe and secure utilization of IT & OT infrastructure.

Further, it is requested to communicate the following measures on Cyber security to the employees working under your control and ensure adoption under their jurisdiction.

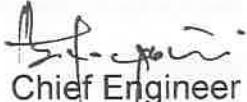

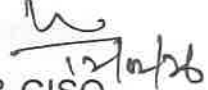

- Exercise caution when opening e-mail attachments even if the attachment is expected and the sender appears to be known.
- Ensure that up-to-date patches and fixes are available on the operating system and application software such as browsers etc.,.
- Ensure that default login credentials of devices such as routers, firewall, storage equipment etc., are changed prior to the deployment of such devices in the operational environment.
- Ensure that remote-desktop software (like Anydesk, teamviewer, Ammyy Admin etc.) are not allowed in network. Avoid using Open Proxies, Tor, Free 3rd party VPN services for remote access.
- Ensure that the Antivirus clients installed on your systems are updated with the latest virus definitions, signatures and patches.

- Don't store any usernames and passwords on the internet browser. Don't download any unauthorized or pirated content /software from the internet (ex: pirated - movies, songs, e-books, software).
- Maintain situational awareness of the latest threats. Adhere to the Security Advisories published by CERT-In (<https://www.cert-in.org.in>).
- Implement role-based access control to restrict data access according to job roles. Ensure that employees have only the minimum access necessary, thereby reducing internal threats and unauthorized data movement.

Cybersecurity is a daily practice!

Be Cyber Safe!! Stay Vigilant!!!

Certain measures were issued vide reference cited above and also in various letters of this office, which are available in ESS Portal for strengthening of Cyber Security in the Organization for safe and secure utilization of IT & OT infrastructure.

Further, it is requested to communicate the following measures on Cyber security to the employees working under your control and ensure adoption under their jurisdiction.

- Pirated or gifted copies of software shall not be used in TGTRANSCO network as they may contain virus and even facilitate intrusions into the system.
- Any e-Mail from unknown source shall not be opened as it may contain malicious content. Further, delete all unnecessary e-mails in Inbox, Sent Item & Deleted Item folders regularly and backup important e-mails into a separate folder on the local PC, if required.
- Unnecessarily never install, remove or edit scripts, which affects system configuration.
- Take a backup of critical data regularly. It is the responsibility of the respective users to have a proper backup of critical data.

- Do not uninstall (remove) or disable the official anti-virus program on your computer, nor install a program of your choice.
- Desktop / Laptop must not be left in open mode when not around. Please ensure that desktop is locked before leaving the seat (use Ctrl+Alt+Del+Enter or Win+L to lock).
- Password shall be complex & should comprise of alphabets in upper case as well as in lower case, numbers, special characters etc.

➔ Few Guidelines for creating password:

- (i) Password must be at least eight alphanumeric characters long.
 - (ii) Password shall not be a dictionary word in any language, slang, dialect, jargon etc.
 - (iii) Passwords shall not be based on personal information, names of family etc.
- Users shall safeguard passwords and not leave them in predictable places, like desk/drawers.
 - Browse Internet for Official purpose only. While not working on Internet, close the browser. Cookies and running of active content, such as, ActiveX should be allowed from the trusted sites only.

Emerging threats don't send warnings — they strike. Tomorrow's threats are today's trends — so, watch, learn, and prepare.

Be Cyber Safe!! Stay Vigilant!!!

(As per Annexure)

Lr.No.CE(IT)/DE(IT&Basis)/ADE-CS/F.CISO/D.No.132/25, Dt: 09.12.2025

Sir,

Sub: TGTRANSCO – Guidelines for Strengthening Cyber security - Certain Measures – Issued - Reg.

Ref: Lr.No. CE(IT)/DE(IT&Basis)/ADE-CS/F.CISO/D.No.66/25, Dt: 26.08.2025.

Certain measures were issued vide reference cited above for strengthening of Cyber Security in the Organization for safe and secure utilization of IT & OT infrastructure. Further, it is requested to communicate the following measures on OT security to the employees working under your control and ensure adoption under their jurisdiction.

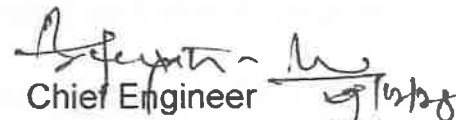

- Enforce strong authentication and role-based access rights; apply the principle of “least privilege” so that only authorized personnel can access critical OT resources.
- Keep an up-to-date inventory of all OT devices/systems (hardware, firmware, software) and continuously monitor them. This helps in knowing exactly what exists and quickly spotting abnormal behavior or unauthorized additions.
- Use secure, baseline configurations for OT devices; disable unnecessary services/ports; harden devices against known weaknesses to minimize the attack surface.
- Ensure all OT devices (PLCs, HMIs, Network devices) use strong passwords — not dictionary words or predictable sequences — and never rely on vendor-default credentials. Many industrial Control System (ICS) breaches exploit default or weak credentials.

- Ensure each account/device has a unique password. Reusing passwords increases risk — compromise of one system may lead to compromise of entire network.
- Shared accounts typically have weak passwords or default credentials, which are generally reused across many devices or sessions. That makes credential compromise (password theft, brute-force, guessing) much easier. Hence don't use shared accounts/credentials.
- Implement strict network segmentation: Divide the OT/ICS network into clearly defined zones and enforce traffic restrictions between zones via firewalls or conduits — only allow required, whitelisted communications.

Firewalls and other Security Solutions mean nothing if humans are the weakest link!

Be Cyber Safe!! Stay Vigilant!!!

Yours Faithfully,

Chief Engineer

Information Technology & CISO

* * *

Certain measures were issued vide reference cited above for strengthening of Cyber Security in the Organization for safe and secure utilization of IT infrastructure. Further, it is requested to communicate the following measures to the employees working under your control and ensure adoption under their jurisdiction.

- Keep a full, current inventory of all OT and IT assets—hardware, software, firmware and continually update it.
- Enforce strict access control using least-privilege and role-based access control (RBAC), and promptly revoke access when no longer needed in all IT and OT systems and premises.
- Always adopt a Zero Trust mindset by verifying identity continuously and using least-privilege technique instead of assuming trust.
- Harden OT devices (controllers, RTUs, HMIs etc..): disable unneeded services/ports, use strong passwords, remove default credentials, apply secure configurations.
- Implement layered (defense-in-depth) controls combining asset mapping, segmentation, access control, monitoring etc....
- Strictly isolate OT systems from internet facing IT systems.

- Stay informed about evolving OT threats— Check available threat intelligence reports, industry bulletins, collaborate across IT and OT, and adapt defenses continuously.
- Maintain backups and recovery plans: Store backups in isolated locations and regularly test recovery procedures wherever possible (Passively in Critical Equipment).
- Remember! Cyber Security is everyone's responsibility! Think before you Click!! Be a Cyber Champion!!!.

Certain measures were issued vide reference cited above for strengthening of Cyber Security in the Organization for safe and secure utilization of IT and OT infrastructure.

Further, it is requested to communicate the following guidelines to the employees working under your control and adoption of the same under their jurisdiction may be ensured.

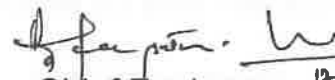

- Don't ignore browser warnings about unsafe websites—report and exit immediately.
- Be cautious of deepfake videos or AI-generated unexpected messages pretending to be genuine.
- Never share passwords, OTPs, credit card CVVs or sensitive information in social media.
- Never use default passwords. Change passwords for every 60 days and always use strong passwords.
- Don't Multi Task during Online Transactions.
- Lock your screen and log out of accounts when stepping away from your device.

- Report any suspicious emails or system behavior immediately—don't ignore the signs.
- Double-check URLs for typos or subtle changes before entering any login credentials.
- Keep all software, browsers, and plugins up to date to patch known vulnerabilities.
- Audit app permissions in devices regularly and uninstall unused or unnecessary apps.
- Beware of fake software update prompts—always update through official sources. Never download and install updates received from WhatsApp and other Social Media platforms.
- Don't scan random or unsolicited QR codes—they may lead to phishing websites.

Every Move Online counts! Track your digital footprint!!

Sir,

Sub: TGTRANSCO – Steps for Strengthening of Cyber security - Certain Measures – Communicated - Reg.

* * *

Due to the prevailing geo-political situations and increased threat perception in the cyberspace, all Employees are advised to stay on high alert and ensure proper cyber security hygiene by following best practices communicated from time-to-time. Further, it is requested to communicate the following measures to the employees working under your control and ensure adoption under their jurisdiction.

- Ensure all systems, software, and tools are up to date with the latest updates and security patches.
- Ensure that endpoint security software is properly installed and active on all systems. Access email accounts from secure devices only.
- Do not use any remote administration tools like Anydesk, Ammy Admin, Team Viewer etc.
- Always download updates and patches from the official website or repositories of the OEM. Never download the updates/patches from any unauthorized third-party websites.
- Ensure that PowerShell is disabled on all Windows-based machines. Always lock screen while moving away from the computer.
- Ensure that passwords for all systems, email, and online accounts are strong and changed at least once every 60 days. Do not use same

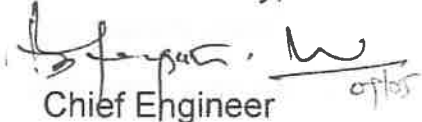

password for department email and other platforms (even personal accounts).

- Do not store credentials on phones or computers or browsers, and avoid sharing sensitive information through third-party messaging apps, email, or social media.
- Always verify a website's authenticity by ensuring it uses HTTPS encryption (i.e., a valid SSL certificate).
- Do not click on suspicious links and exercise utmost caution while opening unexpected emails, SMSes or attachments. Always verify their authenticity through official channels.
- Harden OT systems as much as possible by closing unnecessary ports and applying patches duly ensuring that system functionality is not affected.
- Maintain hard isolation between OT and internet facing IT systems.
- **Never use** default, commonly used and easily guessable passwords.
- Identify critical systems and security devices in the OT system and monitor their logs.
- In case of any security incident, report it to CISO/IT Wing at: ce.it@tgtransco.com.

Cybersecurity starts with you. Be alert. Be aware.

Be the Human Firewall.

Certain measures were issued vide reference cited above for strengthening of Cyber Security in the Organization for safe and secure utilization of IT infrastructure. Further, it is requested to communicate the following measures to the employees working under your control and ensure adoption under their jurisdiction.

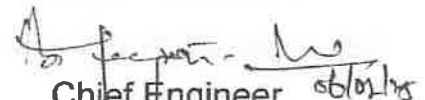

- Make it a habit to verify domain names and URLs before clicking on any links, particularly in emails.
- Ensure that your Desktops/PC's are loaded with latest Operating System, up-to-date software and Anti-virus application.
- Never open links shared on social media from unknown sources.
- Never click and execute email attachments from unknown sources.
- Ensure that Windows updates and Anti-virus application updates are automatically enabled on your systems for ongoing security and performance improvements.
- Uninstall any unnecessary software from your PCs to maintain system security.
- If you suspect an attack or unusual behavior, do not shut down the system as this will help in collecting memory dumps for analysis. Instead, disconnect the network cable immediately to prevent spreading of infections to other systems and notify the IT Wing or CISO.

- Follow regular backup practices and keep those backups offline. Regularly back up important data to protect against data loss or attacks.
- Keep your devices and workstations physically secure and used by authorized personnel only, to prevent misuse or tampering.

Lr.No.CE(IT)/DE(IT&Basis)/ADE-Network/F.CISO/D.No.113/24, Dt:20.12.2024

Sir,

Sub:TGTRANSCO – Measures for Strengthening of Cyber security - Certain
Measures – Issued - Reg.

Ref: Lr.No. CE(IT)/DE(IT&Basis)/ADE-Network/F.CISO/D.No.84/24, Dt:04.10.2024.

Certain measures were issued vide reference cited above for strengthening of Cyber Security in the Organization for safe and secure utilization of IT infrastructure. Further, it is requested to communicate the following measures to the employees working under your control and ensure adoption under their jurisdiction.

- Use strong, unique and unpredictable passwords for each account. Change passwords regularly to enhance account security.
- Be cautious with emails; don't click on links or download attachments from unknown senders.
- Be aware of phishing attempts; check for spelling mistakes, strange sender addresses, or messages purportedly sent to trick as urgent.
- Never share your passwords with anyone, even if they claim to be from IT or management.
- Keep your operating system, apps, and antivirus software updated to stay protected.
- Lock your devices when you step away to prevent unauthorized access.
- Avoid accessing sensitive information over public Wi-Fi networks.
- Ensure websites use HTTPS, especially when entering personal or financial data.

- Report any suspicious activity or potential security breaches to the concerned authority under intimation to IT wing immediately.
- Avoid sharing personal information on social media that could be used for attacks.
- Only download files from trusted sources and scan them for malware before opening.
- Regularly back up important data to protect against data loss or attacks.
- Properly dispose of sensitive documents to prevent identity theft.

Security is a continuous process, not a one-time solution!
